PROFESSIONAL SUMMARY

Product Designer and UI/UX Designer with 2+ years of experience shipping live products across fintech, healthcare SaaS, e-commerce, and productivity. Designed 4 products currently in production: Index Waves (100+ daily active users on Google Play), IppoBill (live at ippobill.com), Goyab (Google Play), and Trackgle (trackgle.jseven.in). Specialises in fintech UX, B2B SaaS configuration systems, mobile app design, and design systems. Works end-to-end from user research and wireframes to shipped product.

SKILLS

Design Skills: Product Thinking, End-to-End UX Design, Wireframing, Prototyping, Interaction Design, Design Systems, Mobile App Design, Dashboard UX, Responsive Web Design, User Research, Usability Testing, Information Architecture

Tools: Figma, Adobe XD, Jira

Frontend: HTML, CSS, Bootstrap

PROFESSIONAL EXPERIENCE

Product Designer | UI/UX Designer | J7 Technology Solutions Pvt Ltd, Tenkasi

March 2024 - Present

Index Waves - Stock Trading Signals App - Google Play - 100+ Daily Active Users

- Designed the product from scratch: call cards displaying entry price, two targets, stop-loss, and open/closed badge - core interaction used by 500+ downloads
- Built dual interfaces: trader-facing Android app and analyst admin panel for posting and managing live and closed signals
- Created a design system (dark palette, purple accent, mono signal labels) later extended to two sibling products - MCX Premier and Equity Emphas - at client request

IppoBill SaaS - GST Billing, Inventory and Business Management - Live at ippobill.com

- Designed the complete platform for Indian small businesses: billing, GST invoicing, inventory tracking, stock management, and customer records
- Optimised the invoice creation flow (highest session engagement feature) for use while a customer waits at point-of-sale
- Built GST-compliant invoicing with HSN codes and tax splits pre-populated from the product catalogue, removing a key manual step

Setter - Doctor Appointment Booking System - Healthcare SaaS - US Hospital Clients

- Designed patient booking flow and clinic configuration panel for a healthcare SaaS platform sold to US hospital groups
- Solved a core onboarding problem: non-technical clinic staff can configure their own setup without requiring engineering support
- Introduced a module toggle system so edge-case hospital configurations can be handled by adding toggles rather than rebuilding forms

Layline Campaigns - SMS and Email Campaign Platform for Healthcare Operators

- Designed a single-page campaign creation flow with all four steps on one scroll, reducing context loss for frequently interrupted healthcare operators
- Surfaced compliance controls (character counter, send rate, time window, day targeting) in the creation form rather than buried in settings
- Created a six-status vocabulary (Ready, Sending, Resting, Paused, Stopped, Completed) mapping directly to the send-queue lifecycle

CareZhen - Hospital Management System - Live at carezhen.com

- Designed role-based views for doctors, receptionists, pharmacists, and admins - each role sees only what is relevant to their workflow
- Surfaced DPDR compliance audit alerts on the dashboard rather than in settings, ensuring compliance issues are visible on login
- Built multi-tenant configuration supporting two-doctor clinics and multi-location hospital groups on the same platform

Trackgle - B2B Project and Time Tracking SaaS - Live at trackgle.jseven.in

- Designed and shipped a fully deployed B2B SaaS product using AI: task boards, timesheets, leave tracking, project management, and team feeds
- Demonstrated that a single designer can ship production-ready software end-to-end within one sprint using AI-assisted development

Goyab - Android Productivity App - Google Play - Local-First, No Account Required

- Designed a content-saving app with Smart Reminders that resurfaces saved links and articles when the user is most likely to act on them
- Implemented local-first architecture: all data stored on-device with optional encrypted Google Drive backup - privacy communicated within the UI

UI/UX Designer | Fabevy Software Services Pvt Ltd, Tenkasi

May 2023 - October 2023

IppoKart - Electronics E-Commerce Platform - Mobile and Desktop

- Designed mobile-first shopping, product discovery, and checkout flows focused on usability and accessibility

Farm Produce - Mobile-First Farm Fresh Delivery App

- Designed ordering, browsing, and delivery tracking flows with a focus on building trust for perishable goods in a mobile context

PORTFOLIO - LIVE SHIPPED PRODUCTS

Index Waves - Google Play - 500+ downloads - 100+ daily active users
IppoBill SaaS - ippobill.com - GST invoicing and inventory for Indian small businesses
Goyab - Google Play - Android productivity app - local-first, no account required
Trackgle - trackgle.jseven.in - B2B project and time tracking SaaS
CareZhen - carezhen.com - Hospital management system
Setter - setter.layline.live - Doctor appointment booking for US hospital groups

EDUCATION

Bachelor of Information Technology

Karpagam University, Coimbatore | 2017 - 2021
